

Oleksandr Handziuk

Site Reliability / Platform / Infrastructure / Cloud / DevOps Engineer

✉ alex1021983@gmail.com | ☎ +44 77-999-01-398

Professional Summary

Site Reliability / Platform Engineer with 7+ years of experience designing, automating and operating production cloud platforms, supported by 5 years of experience in production support and enterprise systems operations.

Skilled in AWS, Kubernetes, Infrastructure as Code, Python automation, and distributed systems, with a strong background in reliability engineering, observability, incident response, and building scalable cloud solutions.

Skills and Tools

- **Cloud & Platform**
 - **AWS** (EC2, EKS, ECS, IAM, ALB, Route53, CloudWatch)
 - **Infrastructure as Code** (CloudFormation, Terraform)
- **Databases & Data Platforms:**
 - Elasticsearch / OpenSearch (administration, performance tuning)
 - MongoDB, Amazon DocumentDB (administration, performance tuning)
 - PostgreSQL & MSSQL
 - Exasol (enterprise analytical SQL database)
- **Scripting & Automation**
 - Python, Bash
- **CI/CD & Configuration Management**
 - Jenkins, GitLab CI, Ansible
- **Reliability Engineering**
 - Incident Management, RCA, MTTR reduction, Toil elimination, On-call operations
- **Monitoring and Observability**
 - CloudWatch, Zabbix, EFK (Elasticsearch, Fluentd, Kibana), Datadog
- **Containers & Systems**
 - Kubernetes (EKS), Docker, Linux troubleshooting

Key Achievements

- **Reduced operational toil** and improved engineering productivity by automating repetitive support and remediation workflows using Python, infrastructure tooling and AI-assisted development tools, accelerating troubleshooting and reducing manual intervention.
- Reduced infrastructure costs by **10–15%** through rightsizing, scaling optimisation and usage analysis across AWS environments
- Enhanced observability by building centralised logging pipelines and improving alerting, enabling real-time troubleshooting, proactive detection of operational and security events, faster incident response and reduced MTTR.
- **Optimised Elasticsearch performance** (~1TB index) by redesigning shard allocation, reducing latency from seconds to **tens of milliseconds**

Certifications

- Terraform – Managing Infrastructure as Code (Coursera) — **completed**
- Certified Kubernetes Administrator (CKA) – **in progress**
- AWS Certified CloudOps Engineer Associate – **in progress**

Experience

➤ Site Reliability Engineer

XR Global (formerly Adstream)

September 2018 – February 2026

- Reduced incident detection time by designing and implementing end-to-end observability across AWS using CloudWatch, Zabbix, and EFK
- Improved infrastructure consistency and repeatability by implementing Infrastructure as Code (**CloudFormation, Terraform**), reducing configuration drift and simplifying platform changes.
- **Knowledge Transfer & Services Transition:**
 - **Led the transition of 40+ production services** to a newly established engineering team in another region.
 - Created operational documentation, runbooks and troubleshooting guides to support long-term service ownership.
 - Delivered shadowing sessions and technical mentoring to accelerate knowledge transfer and team onboarding.
 - Ensured the new team achieved operational readiness without customer impact or disruption to platform availability.
- Built and operated real-time log ingestion and processing pipelines, providing end-to-end visibility across distributed systems and accelerating detection of customer-impacting issues.
- Operated a high-throughput production platform supporting large-scale containerised workloads, ensuring reliable service delivery through proactive monitoring, automation, and incident response.
- Led response to high-severity customer-impacting incidents, acting as a technical escalation point, coordinating cross-team mitigation efforts and driving service restoration.
- Monitored and troubleshoot **end-to-end system behaviour across distributed components**, identifying bottlenecks and failure points in complex service pipelines.
- Reduced incident recurrence by leading **root cause analysis** and implementing preventative fixes
- Reduced manual operational effort by developing **Jenkins, Python and Bash automation** for repetitive support and remediation tasks
- Collaborated with Software teams (Scala, .NET, Node.js) to improve **deployment reliability and production readiness**
- Improved platform resilience by **standardising operational workflows** and reducing manual intervention

➤ Senior Platform Support Engineer

Adstream

December 2013 – September 2018

- **Provided 2nd/2.5-line technical support** for production applications, investigating complex issues across application, infrastructure and data layers to minimise customer impact.
- **Acted as the technical escalation point** for high-priority production incidents, working closely with software engineers and DevOps teams to diagnose issues and coordinate resolution.
- Partnered with development, QA and platform teams to investigate software defects, identify root causes and implement long-term reliability and stability improvements.
- Delivered technical training, documentation and mentoring to global support teams, improving operational consistency, troubleshooting capability and knowledge sharing.

➤ Team Lead – Online Banking Support

JSC Kreditprombank

October 2008 – September 2013

- Led technical support for client banking platform, ensuring system availability and stability
- Managed support processes and coordinated **cross-team issue resolution**
- Executed banking software installations and offered sustained client support, maintaining system functionality and user satisfaction throughout the engagement.
